

## ARCHIVE ATTENDER FOR EXCHANGE

Archive Attender offers:

- *centralized control over the size and content of user mailboxes*
- *full-text indexed archive search & restore.*
- *no on-site professional services*
- *no SQL database or complex pre-reqs (just Windows & Outlook)*
- *small footprint: leverage existing storage & servers*
- *nothing installed on the Exchange server or Outlook client*
- *takes less than 45 minutes to install and start archiving*

Companies are experiencing substantial growth in storage due to their high reliance on email. Electronic mail is an accepted and preferred mode to communicate with clients/co-workers, conduct business negotiations, discuss confidential matters and formalize business contracts.

As a result, much of an organization's critical data is being stored on susceptible mail servers. In order to maintain the integrity of information, companies must find a way to move sensitive information out of the messaging system and into a protected location where it can be maintained for extended periods of time. Archive Attender is an automated email archiving tool that moves essential data out of the email and into a secure, external storage device. Messages and attachments can be archived based on age, location and size. Management is executed through a remote web interface that can be used to setup the archiving schedule, search the indexed archives and view reports. Archive Attender can be applied even more effectively when coupled with sister product Mail Attender for Exchange Enterprise

Administrators also have the ability to control and grant access rights to users. By doing this, users are able to archive their own messages/attachments and reduce the amount of time they normally spend maintaining their mailboxes. With Archive Attender, users can view their archived messages within Outlook and sort/group their archived messages. Additionally, users are able to manage their own archived messages by retrieving and forwarding messages directly out of the archive. Archive Attender is easy to install and there no additional hardware or client installations required.

Archive Attender reduces storage space on your mail servers and secures corporate information to comply with corporate, legal and regulatory requirements.

The screenshot shows the 'Archive View - Microsoft Outlook' window. The 'Folder List' on the left shows the 'Archive View' folder selected. The main area displays a table of archived emails with the following columns: Select From, Subject, Received, and Size. A search bar is visible at the top right, and a 'Restore Message' button is present.
