

DISCOVERY ATTENDER FOR EXCHANGE

Reduce the Costs Associated with Search and Discovery

Whether your company gets subpoenaed to produce documentation or HR is conducting an internal investigation; locating and recovering information for legal discovery can be very costly to an organization. Discovery Attender gives you the ability to automatically search through Exchange mailboxes, PST files and files on your network.

Automate Time Intensive Tasks

Searching through high volumes of electronic data could take thousands of man-hours to complete and thereby, be impossible to perform manually. With the help of Discovery Attender, you can quickly locate critical information to meet court appointed deadlines.

Secure Potential Evidence

Once significant information is located, it must be kept in a safe and secure location. Any maltreatment of data could result in large fines or the exclusion of evidence in court proceedings. Discovery Attender allows you to move or copy information to a central repository for safekeeping.

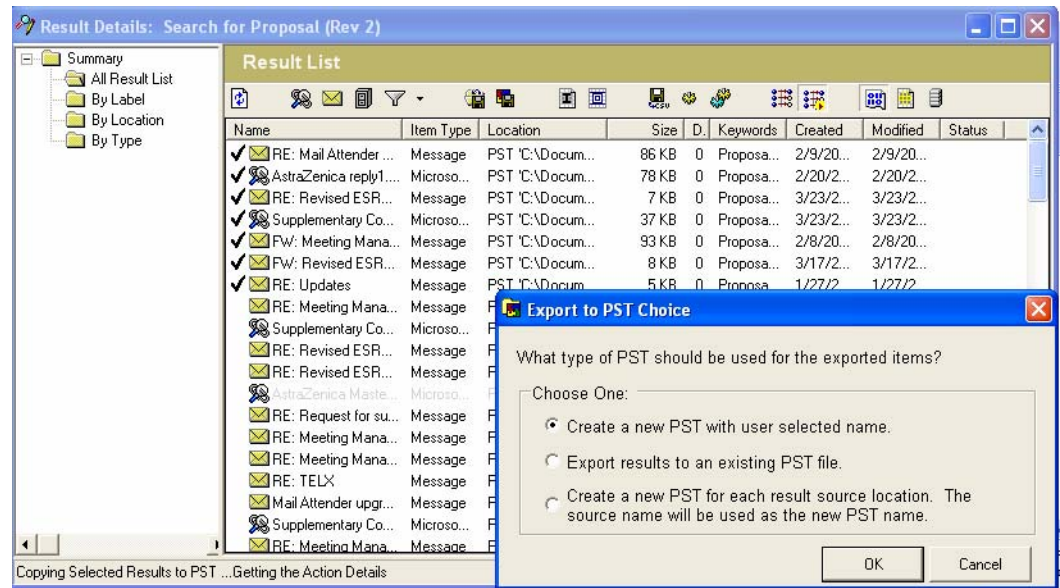

Mitigate Legal Liability

Email and other types of electronic information are commonly being used as evidence in lawsuits. By auditing employee usage, you can reduce the risk of sexual harassment claims and workplace lawsuits.

Dealing with computer-based information in the discovery process can be very challenging to an organization. With over 90% of business documents and communications being prepared electronically, there can be substantial amounts of data to review once a document discovery request or subpoena is issued. In addition to the difficulty of searching large volumes of information and the extensive costs involved, many times these requests must be completed under intense court-imposed deadlines making the task even more cumbersome.

Whether your organization gets subpoenaed to produce electronic evidence, you're addressing the new amendments to the Federal Rules of Civil Procedures or HR is conducting an internal investigation, Discovery Attender will help you quickly find and produce electronically stored information (ESI).

Discovery Attender is an electronic discovery tool designed to make the searching, viewing and supervision of electronic data easy and efficient. It is intended to perform dynamic keyword searches in common file storage areas, Exchange mailboxes, Public Folders and PST files. Discovery Attender can automatically execute powerful scans of message subject, body, attachments and file type through customizable criteria. Once relevant information is located, it can report, open, copy or move the data to a secure location for further investigation.

Email and other types of computer-generated information have been at the core of many recent court decisions. Often, electronic data is casually written without concern that it may one day be subject to discovery in court. An organization's fate can rely on the informally written communications that are hiding in their corporate systems. More than being reactive, Discovery Attender lets you manage data on an ongoing basis through routine monitors allowing you to maintain control over content and protect against future liabilities.

SYSTEM REQUIREMENTS

- Windows 2000 or higher
- Approximately 30 MB for basic install
- Additional Hard Drive space may be required for large searches
- 400 MHz or higher CPU
- Outlook 98 or higher (if installed on a server not running Exchange)
- .Net Framework Version 1.1 (installed if not present)

ARCHITECTURE

- Non-intrusive, user-friendly installation
- Works with Exchange 5.5, 2000 or 2003
- Works with Outlook 98 or higher
- Operates from your desktop
- Nothing needs to be installed on your Exchange servers

© Sherna Software LLP.

GENERAL FEATURES

- Manage legal, HR and corporate discovery needs
- Access data for suspected evidence, confidentiality breaches or misrepresentations
- Secure potential evidence once it is located
- Rules and scanning functionality are transparent to end-users
- One common interface for rule creation, progress monitoring and results
- Fast and secure system to execute document discovery requests

SEARCH FEATURES

- Wizard-like interface for quick and easy searches
- Search Exchange mailboxes and PST files
- Examine files stored on common file storage (file servers)
- Searches most common file formats including .doc, .xls, .pdf, .zip, etc.
- Dynamic keyword scanning with Boolean logic (and, or, not)
- Powerful searching of message subject, body and attachments
- Customizable criteria includes age, type, address, extension and wildcards
- Copy matching files, messages or attachments to a local repository for later review

DATA REPORTING AND RETRIEVAL

- Collect specific data to make informed decisions
- User-friendly interface for management of result items
- Summary and detailed reports of the result items including keyword snippets
- Accessible back-end database for custom reporting
- Easy retrieval of matching results items, either collected at the time of discovery or (if available) upon request in the interface
- De-duplication of results based on user-selected criteria
