

## UNIFY ENTERPRISE: ROLE-BASED DELEGATION FOR ACTIVE DIRECTORY, EXCHANGE, MOBILITY & PASSWORD MANAGEMENT

*Unify allows you to selectively delegate provisioning and change management whilst:*

- *Protecting Active Directory*
- *Controlling Access for the Mobile Workforce*
- *Safeguarding the integrity of Exchange*
- *Enabling User Self Service Password Management*
- *Optimizing Your Migration to Exchange 2007*

*“Unify is like an expert system that is programmed to perform day-to-day AD/Exchange operations under the guidance of staff members who may not be particularly experienced.”*  
**Ferris Research**

*“Unify has certainly made user provisioning a much simpler and more productive task and has freed our IT department for other more critical purposes.”*  
**Jonathon Taylor, California State Univ.**

*“By giving access to Unify’s webportal, we can enable users to change their passwords and manage their own distribution lists without having to rely on IT, giving our department the ability to focus on mission-critical projects.”*  
**Davis Truong, Engineer at CashEdg**

Unify Enterprise Edition enables you to easily configure the appropriate level of user-delegation for tasks surrounding Active Directory (AD), Microsoft Exchange and Mobility Gateways (BlackBerry Enterprise Server (BES) & Windows Mobile) by allowing user self-service changes to be made *without* exposing the organization to disruption from configuration errors.

Unify’s consistent and repeatable Delegation Process improves responsiveness, decreases operational costs, reduces skill level, realizes security goals and reduces risk for:

- **User Provisioning:** add user mailboxes, configure their attributes against templates, maintain distribution list membership, and de-provision mailboxes when users leave.
- **Credential management:** allow users to reset their passwords whilst ensuring they adhere to rules on password composition and lifetime.
- **Unauthorized change prevention:** ensure that critical configuration changes are only made by those authorized and qualified to do so with Rollback where needed.
- **Role-Based, Self-Service Delegation of tasks:** permit non-IT users to perform certain tasks such as distribution-list membership, configuration of email profiles, over-the-air configuration and reset of mobile devices, location or phone number changes without needing to contact the help-desk.
- **Security & Compliance:** track the activity of those who access the system, keeping the wrong people out while allowing the right people in.

Unify provides this change management, automated provisioning, mobile and client device configuration and delegated administration all via an easy-to-use role-based Web portal.

### Microsoft Active Directory Manager

Unify Active Directory Manager helps reduce the number of privileged accounts and helps prevent unauthorized changes to one of the most vital parts of your IT infrastructure. Providing an increased level of control over AD will result in increased security, maximum productivity and will simplify compliance and internal Security Auditing.

### Microsoft Exchange Manager

Unify Exchange Manager allows administrators to set policies that work hand-in-hand with Active Directory to protect the integrity of Exchange. Exchange management tasks are safely and securely performed in Unify’s web-based console according to role-based permissions set by Senior IT staff. Unify Exchange Manager simplifies the complexities of managing Exchange 2007 by eliminating the need for PowerShell scripts.

### Mobility Manager

Unify Mobility Manager provides a single web-based interface through which you can manage your entire mobile access infrastructure - including your users’ devices of choice.

### Password Manager

Unify Password Manager provides an easy-to-use standard interface that allows IT to set and strictly enforce strong password policies. It also allows IT to establish any number of identity challenge questions to be used, that will allow employees to verify their identity and securely reset their own passwords. This is done through a self-service web portal without a call to the help desk – any time of the day or night.

### Migration Manager

Unify Exchange Migration Manager enables you to test and automate migration tasks through a simple web interface and thereby dramatically reduce the complexity of the project—which minimizes disruption to your end users and reduces costs.
